

**Hydro-Testing guarantees you a quality leak free system.**

**Manufacturing hydrostatic testers since 1969.**

Cost of Hydrostatic Testing can be reduced as much as 90% using the Hydro-Test Hydrostatic tester. This electric powered unit is portable, easy to use, rugged and money saving. The test pump is designed to work best with water pressure feed but will operate with gravity feed where water pressure is not available. DR6334 Series Drafting testers are also available, you can draft or use water pressure feed with these units. Excellent for testing piping systems, boilers, automatic sprinkler systems, fire hose and extinguisher tanks.

Model 6334-350 testers are the standard of the industry for low pressure testing. Used by contractors, fire departments, and fire equipment dealers thousands of times each working day.

Your Hydro-Test Hydrostatic tester is cased in a powder coated 16 ga. steel box. Units are equipped with an easily adjustable relief valve that can be set for any pressure up to the maximum pressure for your unit, brass and stainless steel fittings, 1/2" y-strainer on inlet plumbing, glycerin filled pressure gauge, high pressure check valve, electrical cord, and a high pressure hose. Units are tested, shipped complete, ready to operate. Power required 120 volts AC.

Units available in the 6334 Series:

Part#	Description
<b>996334350</b>	350 PSI, ¾ HP, 3 GPM, 64 lbs
<b>996334550</b>	550 PSI, ¾ HP, 2 GPM, 65 lbs
<b>996334750</b>	750 PSI, 1 HP, 2 GPM, 70 lbs
