

# Model DPV-1 Dry Pipe Valve

FOR DRY SYSTEMS

The DPV-1 features a unique offset clapper that allows for a simple, compact valve that helps minimize installation and service labor. This differential-style valve can help deliver water faster in comparison to lower-pressure alternatives in large volume systems by resisting water entering branch lines.

## Features & Benefits

- Simple reset procedure through the elimination of priming water
- Compact, pre-trimmed and semi assembled, easy to operate valve trim
- 250 psi (17,2 bar) pressure rating
- Ductile iron construction for a lightweight valve to minimize shipping cost
- A variety of inlet and outlet connections

## Applications

Unheated warehouses, parking garages, store windows, attic spaces, loading docks

## Available Sizes

- 2 1/2" (DN65)
- 3" (DN80)
- 4" (DN100)
- 6" (DN150)

## Technical Datasheet(s)

TFP1020 (Global)  
TFP1090 (European)
